

New PennTex® Replacement Alternators

Now offering our line of high efficient late model alternators to replace PennTex® style alternators

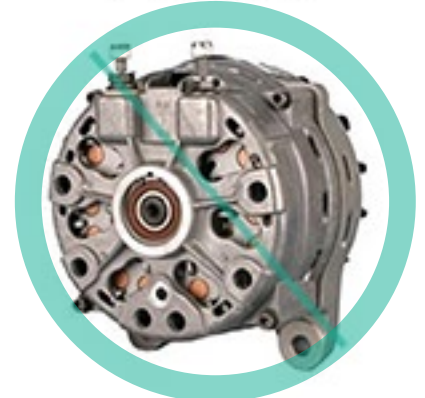

R Mount

T Mount

V Mount

Efficient design *Dual 3 phase alternators *Low weight and high output
State of the art hairpin stators *Dual rectifier with 12 press fit
60 Amp diodes *Dual 3 phase
96 slot stator vs 36 slot

These alternators are ideal replacements. This design will run cooler and recover your battery faster than industry standards. With just a few different alternators, we can replace hundreds of PennTex® part numbers to reduce inventory for parts stores, shuttle/bus companies, municipalities, and fleets.

Each alternator is made as a drop-in replacement and is available with both the Gen1 and Gen2 PennTex® style plug. Upon request and with no additional charge we can build as internally regulated self energizing 1-wire type which allows the customer to replace the original PennTex® externally regulated system entirely!
